Author Index 2005

Allen, J E	Aeronautics-1903; aerospace-2003; ? ? 2103	235
Azzam, H	Intelligent management of helicopter health and usage management systems data	507
Balakrishnan, S N	Midcourse guidance law with neural networks	131
Belo, E M	A flutter suppression active controller	19
Bornengo, D	Evaluation of hexagonal chiral structure for morphing airfoil concept	185
Bradley, R	Quantification and prediction of pilot workload in the helicopter/ship dynamic interface	429
Bruyere, L	Robust augmented lateral acceleration flight control design for a quasi-linear parameter-varying missile	171
Buggy, T W	Quantification and prediction of pilot workload in the helicopter/ship dynamic interface	429
Chakraborty, D	Numerical investigation of transverse sonic injection in a non-reacting supersonic combustor	205
Cook, J	Intelligent management of helicopter health and usage management systems data	507
Corchero, G	An approach to the use of hydrogen for commercial aircraft engines	35
Coton, F	A simulation study of helicopter ship landing procedures incorporating measured flow-field data	411
Cottrell, R G	Minimizing manoeuvre advantage requirements for a hit-to-kill interceptor	113
Davis, R N	Autonomous component health management with failed component detection, identification, and avoidance	483
De Marqui, C Jr	A flutter suppression active controller	19
Farhadi, M	Three-dimensional study of separated flow over a square cylinder by large eddy simulation	225
Franchini, S	On the aerodynamics of leading-edge high-lift devices of avian wings	63
Galbraith, R	A simulation study of helicopter ship landing procedures incorporating measured flow-field data	411
Gill, L	Prediction of stress concentrations associated with interacting stress-raisers within aircraft design: methodology development and application	193
Golan, O M	End-game guidance laws for dual-control missiles	157
Graham, R H	Prediction of stress concentrations associated with interacting stress-raisers within aircraft design: methodology development and application	193
Grevtsov, N	An application of the mechanical rotation scheme to an analysis of the motion of flying objects	69
Gurfil, P	Non-linear missile guidance synthesis using control Lyapunov functions	77
Han, D	Midcourse guidance law with neural networks	131
Hess, R A	Design and evaluation of a damage-tolerant flight control system	341
Hong, Y S	Finite element analysis of shafts under combined loads	45
Horn, J F	Simulation of pilot workload for a helicopter operating in a turbulent ship airwake	445
Hyde, T H	Finite element analysis of shafts under combined loads	45
Hyung, S	Reconfigurable flight control system design using input–output information	277
Kaderbek, D	Pulse width modulating low power magnetic torquers for precise spacecraft attitude stabilization	471
Kim, Y	Design of reconfigurable flight control system using adaptive sliding mode control: actuator fault	321
	Reconfigurable flight control system design using input–output information	277
Knight, P	Intelligent management of helicopter health and usage management systems data	507
La Rosa, G	Preliminary design and wind tunnel tests of a micro air vehicle for surveillance and sensor-bearing applications	1
Léchevin N	A multi-objective control approach for the synthesis of robust digital guidance laws	89
Lee, D	Simulation of pilot workload for a helicopter operating in a turbulent ship airwake	445
Lee, D G	Active homing performance enhancement with multiple model radome slope estimation	217
Lianos, D P	Effect of sliding mode observers in the homing guidance loop	103
Long, L N	Computational fluid dynamics simulations of ship airwake	369
Macdonald, C A	Quantification and prediction of pilot workload in the helicopter/ship dynamic interface	429
Manna, P	Numerical investigation of transverse sonic injection in a non-reacting supersonic combustor	205
Marques, F D	A flutter suppression active controller	19
Melts, I	An application of the mechanical rotation scheme to an analysis of the motion of flying objects	69
Meseguer, J	On the aerodynamics of leading-edge high-lift devices of avian wings	63

Mirone, G	Preliminary design and wind tunnel tests of a micro air vehicle for surveillance and sensor-bearing applications	1
Moghaddam, M M	Robust, maneuvering control design of an aircraft via dynamic inversion and μ-synthesis	11
Montañés J L	An approach to the use of hydrogen for commercial aircraft engines	35
Moon, G	Design of reconfigurable flight control system using adaptive sliding mode control: actuator fault	321
Moosavi, S F	Robust, maneuvering control design of an aircraft via dynamic inversion and μ-synthesis	11
Morgan, R W	Minimizing manoeuvre advantage requirements for a hit-to-kill interceptor	113
Nelson, E B	Reconfigurable flight control	287
Neville, T	Dynamic and aerodynamic clearance of the Apache AH Mk1 attack helicopter for embarked operations	459
Newman, S	Shipborne aviation: an introduction	363
Ochi, Y	Flight control system design for propulsion-controlled aircraft	329
Ohlmeyer, E J	Midcourse guidance law with neural networks	131
Pachter, M	Reconfigurable flight control	287
Pérez-Grande I	On the aerodynamics of leading-edge high-lift devices of avian wings	63
Polites, M	Pulse width modulating low power magnetic torquers for precise spacecraft attitude stabilization	471
Polites, M E	Autonomous component health management with failed component detection, identification, and avoidance	483
Quarles, C	Pulse width modulating low power magnetic torquers for precise spacecraft attitude stabilization	471
Rabbath, C A	A multi-objective control approach for the synthesis of robust digital guidance laws	89
Rahnama, M	Three-dimensional study of separated flow over a square cylinder by large eddy simulation	225
Raines, M	Prediction of stress concentrations associated with interacting stress-raisers within aircraft design: methodology development and application	193
Remillat, C	Evaluation of hexagonal chiral structure for morphing airfoil concept	185
Risitano, A	Preliminary design and wind tunnel tests of a micro air vehicle for surveillance and sensor-bearing applications	1
Robotham, W S	Finite element analysis of shafts under combined loads	45
Sanz, J L	On the aerodynamics of leading-edge high-lift devices of avian wings	63
Sazonov, D	An application of the mechanical rotation scheme to an analysis of the motion of flying objects	69
Scarpa, F	Evaluation of hexagonal chiral structure for morphing airfoil concept	185
Sezer-Uzol, N	Computational fluid dynamics simulations of ship airwake	369
Sharma, A	Computational fluid dynamics simulations of ship airwake	369
Shima, T	End-game guidance laws for dual-control missiles	157
Shin, D	Design of reconfigurable flight control system using adaptive sliding mode control: actuator fault	321
Shin, S J	Active homing performance enhancement with multiple model radome slope estimation	217
Shinar, J	Improved estimation is a prerequisite for successful terminal guidance	145
Shkolnikov, I A	Effect of sliding mode observers in the homing guidance loop	103
Shtessel, Y B	Effect of sliding mode observers in the homing guidance loop	103
Song, T L	Active homing performance enhancement with multiple model radome slope estimation	217
Steinberg, M	Historical overview of research in reconfigurable flight control	263
Swift, K G	Prediction of stress concentrations associated with interacting stress-raisers within aircraft design: methodology development and application	193
Thomson, D G	A simulation study of helicopter ship landing procedures incorporating measured flow-field data	411
Trevino, L C	Autonomous component health management with failed component detection, identification, and avoidance	483
Tsourdos, A	Robust augmented lateral acceleration flight control design for a quasi-linear parameter-varying missile	171
Turetsky, V	Improved estimation is a prerequisite for successful terminal guidance	145
Vetter, T K	Design and evaluation of a damage-tolerant flight control system	341
Vincent, T L	Minimizing manoeuvre advantage requirements for a hit-to-kill interceptor	113
Visser, H G	Optimization of high angle-of-attack approach to landing trajectories	497
Wagstaff, P	An application of the mechanical rotation scheme to an analysis of the motion of flying objects	69
Wells, S R	Design and evaluation of a damage-tolerant flight control system	341
White, B A	Robust augmented lateral acceleration flight control design for a quasi-linear parameter-varying missile	171
Williams, E J	Finite element analysis of shafts under combined loads	45
Zan, S J	On aerodynamic modelling and simulation of the dynamic interface	393
